

Ⅰ Fonea – Companion GPT & Sound Curator App Guide

Fonea is a two-part system:

- 1) **Fonea – Companion GPT** (this chat) → generates curated, *verified* track lists in JSON.
- 2) **Fonea Sound Curator App** (external) → imports JSON, verifies tracks via Spotify, collects your feedback, and exports it back for the next round. This is the key to properly curating music using AI.

Ⅰ 1. Start with a Vibe Brief

Begin here in the **Fonea Companion GPT**. Describe the *vibe* you want – for example:

"I want a dark synthwave playlist for late-night drives." "Looking for warm indie tracks with cinematic energy." "Need instrumental electronic songs for working."

Fonea GPT will ask a few short questions (like mood, energy, or vocals) to lock in your intent, then generate your Round 1 playlist.

Ⅰ 2. Get Your Playlist JSON

After describing your vibe, Fonea will send you a playlist in this format:

```
{  
  "round": 1,  
  "recommendations": [  
    {  
      "title": "Nightcall",  
      "artist": "Kavinsky",  
      "album": "OutRun",  
      "year": "2013",  
      "producer": "Guy-Manuel de Homem-Christo & Kavinsky",  
      "reason": "The anchor track – sets the mood of dark synthwaves and nocturnal driving."  
    }  
  ]  
}
```

Ⅰ Copy only the JSON block (not the commentary above it). Then go to the Fonea Sound Curator App and click:

Import from ChatGPT

Paste your JSON there.

Ⅰ 3. Verification & Review

In the app, you'll see your imported songs, each marked as:

- Verified → confirmed on Spotify
- Unverified → not found or mismatched
- Failed → invalid data or missing metadata

Each recommendation also includes:

- “Why ChatGPT recommended” – short context from this GPT
- Buttons to Search on Spotify or Search on YouTube
- Options to Keep, Skip, or Mark Pending

You can also add feedback notes like:

“I love those vocals, keep that vibe.” “Too slow – avoid this tempo next time.”

These notes will be very helpful for **Fonea Companion GPT**, as your notes will help steer the vibes of your new playlist.

□ 4. Handle Unverified Tracks

If a track is unverified:

- Click the Get Replacements button (orange).
- You’ll see a list of songs that couldn’t be verified.
- Click Copy Replacement Prompt – this copies a ready-to-paste message.
- Return to your Fonea Companion GPT and paste it in the text box as a continuation of the conversation.

Fonea Companion GPT will search verified alternatives and reply with a new JSON containing replacements. Copy that new JSON and import it back into the app.

□ 5. Give Feedback for the Next Round

Once you’ve reviewed the current round, click:

Export Feedback

This creates and automatically copies a JSON file summarizing:

- Your Keep/Skip/Pending decisions
- Any written comments
- The round number

Paste that feedback JSON into this GPT. Fonea will interpret your taste evolution and generate the next round (`round_number + 1`) with refined recommendations.

□ 6. Iterate and Evolve

You can repeat this loop as many times as you want:

- Import a new JSON playlist → review & verify in the app.
- Export feedback → paste it back here.
- Get a new refined JSON playlist.

Each round gets closer to your ideal sound – evolving from your previous likes and comments.

You can filter by:

- **Round** (1, 2, 3...)
 - **Status** (Keep, Skip, Pending)
 - **Verification** (Verified, Unverified, Failed)
-

□ 7. Error Handling

If you ever see an error message in the Fonea app:

- Copy the entire error message.
- Paste it here in this GPT chat.

Fonea GPT will automatically fix the JSON structure or metadata and send you a corrected version to re-import.

□ 8. Coming Soon

Future updates will include:

- Direct Spotify playlist creation (no manual import).
 - One-click integration between ChatGPT and the Fonea app for seamless JSON sync.
-

□ Summary of Workflow

| Step | Action | Where |
|------|-------------------------------------|--|
| 1 | Describe your vibe | Fonea GPT |
| 2 | Copy JSON output | Fonea GPT |
| 3 | Import JSON | Fonea App → <i>Import from ChatGPT</i> |
| 4 | Review, Keep/Skip, Add feedback | Fonea App |
| 5 | Export Feedback (JSON) | Fonea App |
| 6 | Paste feedback here → get new round | Fonea GPT |
| 7 | Repeat until the vibe feels right | Both |

fonea – Curate smarter. Listen deeper.
